PROFESSIONAL SUMMARY

Extensive experience in designing, developing, and maintaining robust automation frameworks using tools like Selenium, Cucumber, and Karate for API/UI automation. Proficient in performance testing, Docker containerization, and configuring CI/CD pipelines with Jenkins for seamless integration. Strong background in cloud-based testing on AWS and agile methodologies, driving efficient and high-quality software delivery.

SKILLS

Core Java, Python	Selenium, Karate UI
Karate API, Rest Assured	Rest API automation
Postman, SOAP UI	Performance testing
Cucumber, TestNG	Docker, Jenkins
Maven, Gradle, Git	JIRA, Agile
Database testing, Snowflake DB	Appium

WORK HISTORY

Associate Lead Quality Assurance Engineer | Clarivate - Bangalore

- Clarivate is a British-American publicly traded analytics company *03/2020 - Current* that specializes in providing transformative intelligence across various sectors, including academia, intellectual property, and life sciences.
- Worked with stakeholders and team members on quality assurance efforts for product.
- Created test cases and test scripts to maintain cohesive team approach to product development.
- Designed and developed comprehensive test frameworks to enhance software quality.
- Trained Mentored junior QA engineers, contributing to their professional growth and skill development.
- Implemented the Karate framework, reducing automation efforts by 70% and enhancing operational efficiency.
- Self-taught and implemented a PowerBI dashboard to improve data analysis and visualization capabilities.
- Facilitated knowledge sharing sessions among team members for cross-training purposes.

- **Project Title:** Thomson Reuters (ProView)
- **Designed, developed, and maintained** comprehensive Web/UI and **mobile automation** frameworks (Android and iOS) using Appium to ensure efficient and scalable testing solutions.
- Configured CI/CD pipelines with Jenkins, integrating GitHub and GitLab for seamless version control and automation.
- Utilized Docker to run tests on containerized environments in AWS, ensuring consistency and scalability in testing
- Managed multiple projects simultaneously while maintaining strict deadlines and high-quality standards.

Software Test Engineer | DXC Technology (formally known as Hewlett Packard Enterprise) - Bangaluru

06/2015 - 07/2018

Project Title: American Airlines

American Airlines is one of the largest global airlines, offering a wide range of domestic and international flights. It is known for its extensive network, providing high-quality service and modern amenities to travelers.

- Automated functional test cases using Selenium and Appium for both web and mobile applications.
- Performed data-driven testing, cross-browser testing, and parallel test execution to ensure comprehensive test coverage and faster execution.
- Conducted regression testing, analyzed results, and submitted observations to development team.
- Coordinated regression test automation activities across supported applications.

HONOR AWARDS

- **Passion for Customer and Client Focused** – Recognized by DXC Technology for consistently prioritizing client satisfaction and delivering exceptional results.
- **Above and Beyond Award** – Awarded by American Airlines (Client) for extraordinary support, proactivity, and ownership of critical tasks, ensuring successful project delivery.
- **PAT on the Back Award** – Recognized by Tech Mahindra for successfully integrating Docker, AWS, and Jenkins into the automation framework, enhancing efficiency and scalability.
- **Best Team Award** – Recognized by Tech Mahindra for contributing to multiple successful releases, demonstrating teamwork and collaboration.
- **Budding Superstar Award** – Awarded by Clarivate for outstanding contributions and performance in the team.
- **Team of the Year Award** – Received by Clarivate for exceptional team performance, delivering outstanding results in challenging projects.
